

# Phytofare™ Green Tea from South Africa

Have you wondered why Green Tea is actually brown? It is due to degradation of key compounds in the time between harvesting and extraction.

Clinically proven to be 10 times better than any other Green Tea product on the market, Phytofare™ is simply the purest possible plant extract.

Phytofare™ exclusively uses live plants. More specifically, we only use the new growth from live plants and, within a half hour of harvesting, the plants are at the factory being processed.

The result is Green Tea extract that is indeed green!

## When you look at Phytofare™, eight key competitive advantages are considered:

1. Phytofare™ is more bioavailable than generic green tea extracts. In fact, it has 10 times greater bioavailability
2. Phytofare™ has 4 times greater residency in the blood stream, 24 hours compared to 8. This means it can be an effective “once a day” dose
3. Phytofare™ offers greater stability over generic. In fact, studies have shown that we offer 100% greater stability over 24 weeks
4. Our cost per dose is a fraction of our nearest competitor
5. Our vertical integration means that we control all aspects of quality and supply
6. Because our product consists of mostly nano-sized molecules, we can achieve greater cellular uptake
7. We can offer Phytofare™ as a stand-alone powder, or entrapped in a proprietary and patented Pheroid delivery system for enhanced bioavailable and greater end-product flexibility. We can even entrapped customers' other ingredients for a truly customized product
8. We are a completely green, zero carbon footprint facility that is both environmentally and socially conscious as we strive to build the Shamile community and bring jobs and prosperity to the region
