An innovative botanical extract with proven activity
Actido™ is a pure botanical extract produced from fresh cucumbers with soothing actions, based on Natexin™, the commercial designation of the mix of different active compounds obtained by Naturalea through its patented proprietary manufacturing process which includes the full control over the entire supply chain, from the cultivars to the final product.

The unique and highly efficient extraction process ensures that all different active compounds composing Natexin™ express their synergic action to the fullest potential. Cytotoxicity, genotoxicity and acute oral toxicity of the extract have been tested according to the reference standards, showing that Actido™ is completely safe at the tested dosage.

Actido™ acts at the earliest stages of the inflammatory cascade, by suppressing the levels of TNF-α, a key regulator of the inflammatory immune response. This activity has been documented by a full data set including in vitro and in vivo evidence. Inflammation states are common in humans, as a result of activity, age or pathologies. A botanical extract with strong anti-inflammatory activity is a true innovation to the market, with possible applications in the prevention and in the symptomatic treatment of inflammatory states affecting different body districts, including the joints and the skeletal musculature. Actido™ is particularly indicated for athletes and sportive amateurs and also elderly people.

Actido™ ready made capsules are available in bulk or packed. Discover co-branding and co-marketing options!
